

## Code Institute Diploma in Software Development

### Syllabus Overview

#### Module 0 - Pre-Programme Technology Primer

The module covers all the necessary prerequisites for our main programme. Students must have a base level understanding of the technologies, concepts and languages before commencing. This module enables the later content to cover material at a level beyond first principles. By beginning at a point beyond the absolute basics, the programme exposes the student to more practical work throughout.

The material is collated in a central resource. The content is sourced from verified pre-existing online video and text based material.

Specifically:

- HTML
- CSS
- Scratch
- JavaScript
- Python
- Git/GitHub

#### Module 1 - Front End Design and Development

This module will develop proficient skills in Front End coding technologies specifically:

- HTML5,
- CSS3,
- JavaScript Libraries including JQuery D3.js
- Front End Frameworks including Bootstrap and AngularJS
- Use Git to maintain, upload and share code with other developers
- Understand and implement responsive design and user experience best practices.
- Use industry standard Integrated Development Environments such as Sublime Text
- Teamwork and collaboration through in-class exercises

#### Topic List

- |  |                                 |
|--|---------------------------------|
| 1. The Box Model                       | 16. Bootstrap Responsive Design |
| 2. The Box Model 2                     | 17. Javascript Revisited        |
| 3. Positioning & CSS                   | 18. jQuery                      |
| 4. Media                               | 19. jQuery Events               |
| 5. Gradients, Transforms & Transitions | 20. jQuery: Traversing mt. DOM  |
| 6. NavBar – CSS Selectors              | 21. Javascript Part II          |
| 7. Flexbox                             | 22. Data Visualisations & D3    |
| 8. Semantic Web & Font                 | 23. D3 & Data                   |

- 9. Balsamiq
- 10. User Experience Design
- 11. Forms
- 12. Git
- 13. Git Remote
- 14. Bootstrap
- 15. Bootstrap Nav Elements

- 24. D3 Scales
- 25. D3 Axes and External Files
- 26. Introduction to AngularJS
- 27. Angular Routing
- 28. Angular Forms
- 29. Angular Services
- 30. Angular Directives

## Module 2 – Back End Development and Data Integration

This module will develop proficient skills in Back End coding technologies and the integration of a variety of data types specifically:

- Python programming
- Use industry standard Integrated Development Environments such as PyCharm
- Debugging code
- Unit Testing
- Classes and Objects
- Be able to access and manipulate data effectively including Structured and Unstructured data using MongoDB and MySQL databases.
- Use the Flask micro framework
- Use the skills gained in Module 1 to create data visualisations
- Teamwork and collaboration through in-class exercises

### Topic List

1. Installing Python
2. Installing PyCharm
3. Testing
4. Version Control
5. Boggle Solver Part 1
6. Boggle Solver Part 2
7. File IO and Exceptions
8. Conway's Game of Life
9. Flask Part 1
10. Classes
11. Database Fundamentals
12. Installing MySQL and MySQLWorkBench
13. MySQL Database Creation
14. Data Creation and Modification
15. Data Selection Queries Part 1
16. Data Selection Queries Part 2
17. Using Python with MySQL Part 1
18. Using Python with MySQL Part 2
19. Using Python with MySQL Part 3
20. Twitter Setup and Trends
21. Twitter API Tweets 1
22. Twitter Streams 1
23. Twitter Streams 2
24. Introduction to Mongo DB
25. Web scraping
26. Dimensional Charting with D3.js, DC.js and Crossfilter.js
27. Deploy a server-side application to a server

## Module 3 – Full Stack Application Deployment

### Overview

This module will develop skills in the integration of modules, students will build and deploy a full stack application framework using Django and advanced Python.

Specifically:

- Creating Templates
- Create a blog
- Create a forum
- Create a polling application
- Implement authentication and security features
- Enable e commerce payment systems including Stripe and Paypal
- Learn advanced database transactions
- Become skilled in integration testing
- Deploy a full stack application to a server

### Topic List

- |  |                                      |
|--|--------------------------------------|
| 1. Virtualbox and Linux Primer Unit      | 16. PayPal Basic Payments            |
| 2. Beginning Django                      | 17. PayPal Subscriptions             |
| 3. Django with Templates                 | 18. Reusable blog app                |
| 4. Django Models                         | 19. Create a forum                   |
| 5. Django Administration                 | 20. Taking polls                     |
| 6. Django Blog – Part 1                  | 21. Django REST Framework            |
| 7. Django Blog – Part 2                  | 22. AngularJs and Django Integration |
| 8. Django Blog – Part 3                  | 23. A Subscription based forum       |
| 9. Django Blog – Part 4                  | 24. Django database transactions     |
| 10. Django Blog – Part 5                 | 25. Django's testing framework       |
| 11. Flatpages                            | 26. Deploying your site              |
| 12. Custom User and Email Authentication |                                      |
| 13. Stripe Basic Payments                |                                      |
| 14. Stripe Subscriptions                 |                                      |
| 15. Stripe Recurring Payments            |                                      |
